

HOT WATER

At Solarwise we have been helping Australians with their hot water needs since 1979. We offer Solar, electric and gas hot water options to suit any application for your home or business.

One of our team will be more than happy to come to you or take the time over the phone and step you through all of your options and pricing.

Solar Hot Water is the best option to save money over the long term. Whilst it is a little more expensive for solar initially, you will greatly reduce your electricity bills and greenhouse gas emissions. Make a difference to the environment. We offer flat panel black chrome copper collectors and evacuated tube options with either a split system or on-roof. We also supply & install heat pumps.

Gas and Electric Hot Water are better options for less of a capital outlay up front. These systems can however, be expensive to run in comparison to solar. Speak with Solarwise for specialist advice on all the alternatives and the one that suits your family or business best.

Gas Hot Water is perfect for any size family. Based on the size of your home and daily habits we will advise you the best size for your needs and the Gas Hot Water system that makes the most financial sense long term.

We will provide you with an accurate cost over the phone or will visit you in person to discuss the different options available on the market today.

Our knowledge stems from over 30 years of installing Gas Systems.

Solarwise has been an avid supporter of hot water and solar technology since 1979, making a name for ourselves as industry leaders throughout Queensland in particular. The company was originally formed and known as Queensland Insulation & Solar, with solar hot water one of the very first products we installed.

SOLARWISE PRODUCTS

Solarwise has been a valued local provider since 1979. We provide a range of products including those shown below to add value and comfort to your home or business.

Solarwise is trusted in the industry for the care we take, the wise advice we offer and the quality product we install. Over the country there are hundreds of thousands of happy customers with our products and we are proud to be of service to them.

SPECIALISING IN POOL HEATING, HOT WATER, SOLAR POWER, AIR CONDITIONING, SKYLIGHTS & INSULATION

FAMILY BUSINESS SINCE 1979

POOL HEATING

Want to enjoy your pool more often? Find you barely use it? Or maybe you can only swim in those summer months? Solarwise Pool Heating changes all of that with a low cost long-lasting solution. Solarwise specialises in the design, manufacture and installation of heat pumps, solar pool heating and blankets & rollers.

HEAT PUMPS

Solarwise Heat Pumps are perfect when you want to swim at any time or you want a special temperature more consistently. Whether for your family or yourself, Solarwise Heat Pumps will heat (and chill if needed) your pool for lap swimming, relaxing dips, hydrotherapy or for your Spa, whatever you desire. We also offer specialised heating in commercial aquatic centres or even for aquariums. Many of our heat pumps we still make ourselves here in Australia. Now that's a big point of difference.

SOLAR POOL HEATING

Solarwise Solar Pool Heating is a popular choice for many pools in our sunny climate and we have completed tens of thousands of installations both domestically and commercially, locally and nationwide. Solar can extend your swimming season to up to 10 months a year without the larger running costs of a heat pump. Solar is very cost effective and a smaller capital cost. Our solar is manufactured in Australia.

POOL BLANKETS & ROLLERS

We make Blankets & Rollers ourselves from the very small to the very large. We offer bubble and thermal styles of blankets depending on the pool and application. All of our blankets & rollers are specially custom designed to be the absolute best for your pool and be simple for using every day. Additionally we offer a variety of extended options such as motorised rollers, in-ground rollers or a roller attached to your fence.

SOLAR POWER

At Solarwise we provide a range of solar power systems both for our residential clients and larger commercial systems for businesses, factories and the like. Generally, for a residential home you'd be looking at no more than a 6.5kw system. Often our clients opt for a 3 to 6.5kw system connected to the grid but there are many good reasons to look at an off grid stand alone system or a hybrid option. We are seeing a strong growth in battery technology now and the reduction of our reliance on grid power alone. Talk with us today about your options.

For a commercial system this would start around 10kw and upwards of 100kw. We can fully design and install a system that suits your needs and one that lasts the test of time.

Because we have been in the industry for such a long time we can provide you with tailored advice and solutions that suit your budget and requirements. Contact Solarwise today.

AIR CONDITIONING

At Solarwise we offer proper detailed sizing based on all aspects rather than just taking an educated guess. Often this can save you money.

Other times it can assure you have the right size system for what you want. We offer all major brands including Daikin, Fujitsu, Toshiba, Mitsubishi, Samsung and Carrier. Whether for your home, office or factory, we have a split or ducted system that will suit you.

INSULATION

We have been experts in insulation since 1979.

Solarwise offers all types of insulation both supplied and installed including thermal and acoustic, earthwool, glasswool and polyester.

Our prices and advice on insulation are second to none so you know that your home is in good hands with Solarwise.

SKYLIGHTS

Solarwise offers a broad range of different skylight options. Skylights are wonderful for the natural light they bring in can really change the whole dynamic of your house and how you live. Contact us today to learn more.
